

2017 10-Year Assessment – www.atc10yearplan.com

Generation Integration Screening Studies

ATC voluntarily performed a high level, steady-state screening of transmission facilities in Michigan's Upper Peninsula. This was done to assist generation developers with the preliminary identification of potential locations where existing transmission facilities may be able to accommodate the addition of new and/or additional generation capacity. More detailed information can be found on ATC's Oasis page, [here](#).

If ATC proceeds with additional studies they will be posted to ATC's Oasis page upon completion.
