

10-Year Assessment

An annual report summarizing proposed additions and expansions to the transmission system to ensure electric system reliability.

Projects in design or under construction

Transmission projects that will significantly affect system performance, have regulatory approval if required and are currently in design or under construction are listed in Table PR-24. Most notable include:

- Construct 69-kV line from new Warrens Substation to the Council Creek-Tunnel City 69-kV line,
- Construct the Rockdale-West Middleton 345-kV line, and
- Rebuilding the Brodhead to South Monroe 69-kV line.

Because of the number of projects in certain areas, finding sufficient outage opportunities has become an issue. We are striving to more accurately predict the potential cost implications of construction/connection outages and schedule outages to minimize such potential costs.
