

# 2011 Assessment Study Design Customer and Stakeholder Meeting

David Smith

May 10, 2010

Pewaukee

# Purpose

- FERC Order 890 Compliance
- Solicit pre-Study Comments
  - 2011 Assessment Process
  - Planning Criteria
  - 2011 Assessment Assumptions

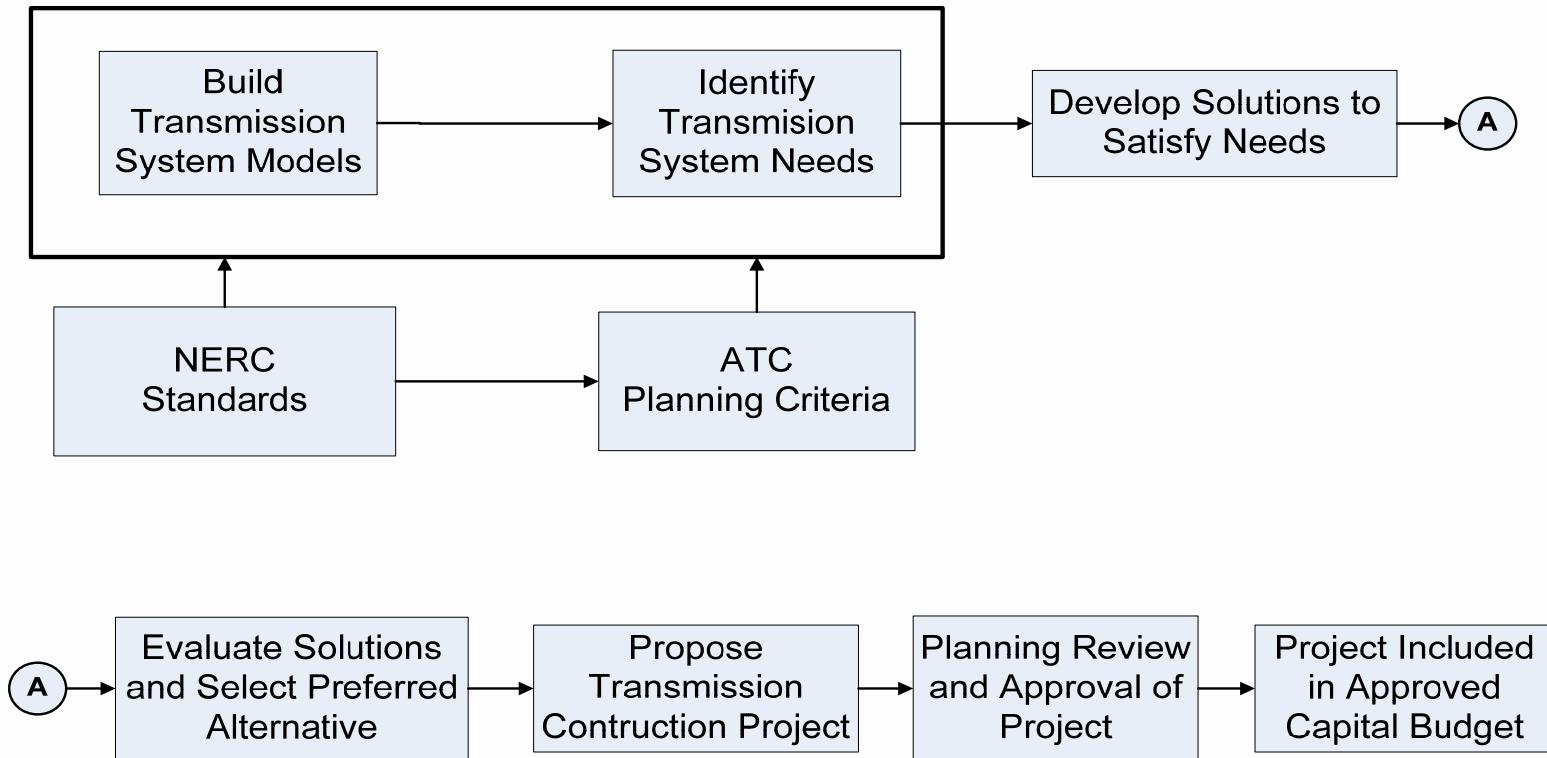

A photograph showing two construction workers in safety gear (hard hats and harnesses) working on a large, dark steel beam. One worker is standing while the other is crouching. They appear to be performing welding or bolting work. The background shows more of the steel structure and some blue sky.

# FERC 890 Principles

- Coordination
- Openness
- Transparency
- Information Exchange
- Comparability
- Economic Studies

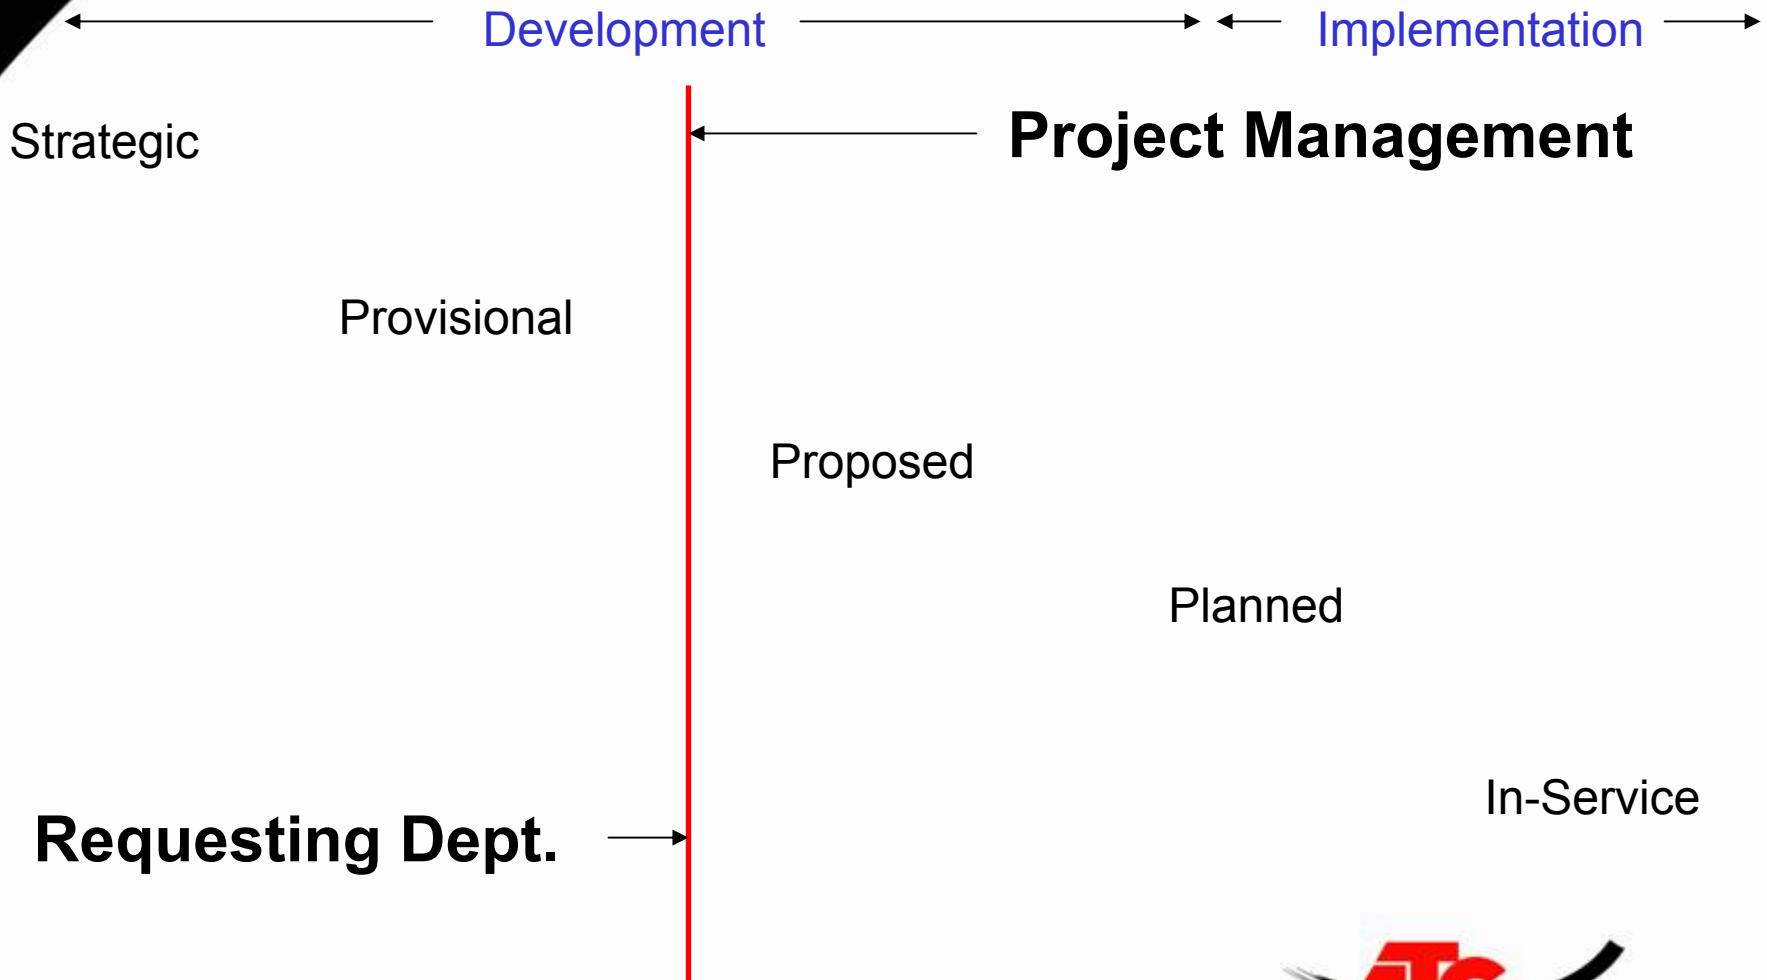

# Transmission Planning Process

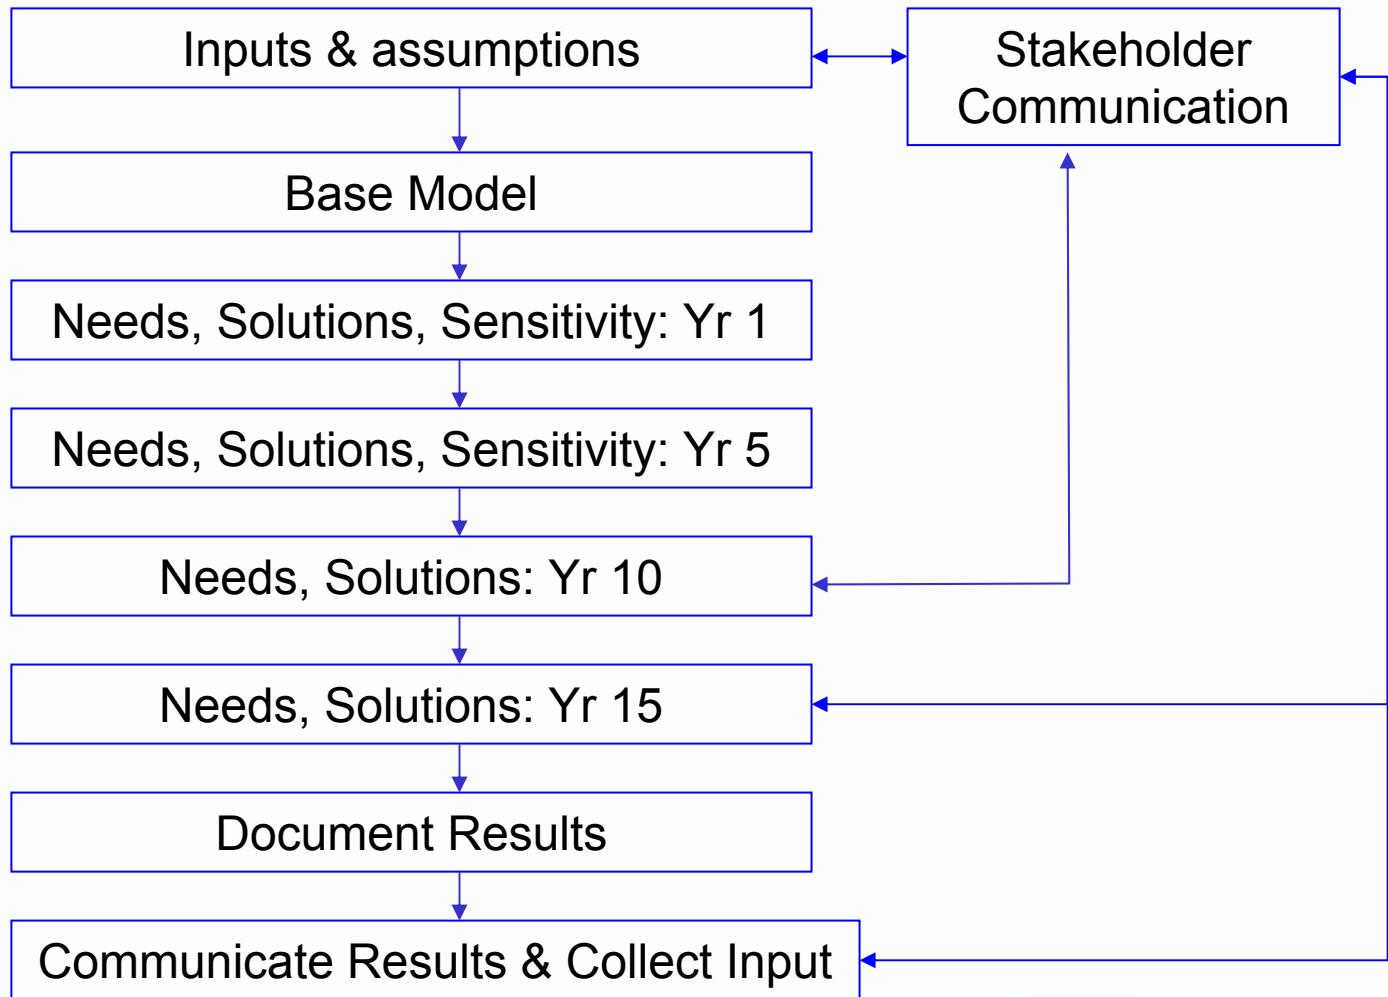

# Public Planning and Asset Delivery

# Assessment Process

# Planning Criteria

- NERC Standards
- ATC Planning Criteria

<http://www.atc10yearplan.com>

Planning Factors

- Solicit Improvement Ideas

A black and white photograph showing several workers in safety gear and hard hats working on a large electrical transmission tower against a clear blue sky.

# Model Years

- 2011 (As-Planned)
- 2012
- 2016
- 2021
- 2026

A photograph showing several construction workers in safety gear (hard hats, safety vests) working on a large, dark steel girder or beam. They appear to be performing welding or bolting operations. The background shows more structural elements of a bridge or building under construction.

# Load - Historical

- Request by October 1
  - summer peak
  - winter peak
  - light load
  - shoulder load
- Due by December 1
- Add to Databases

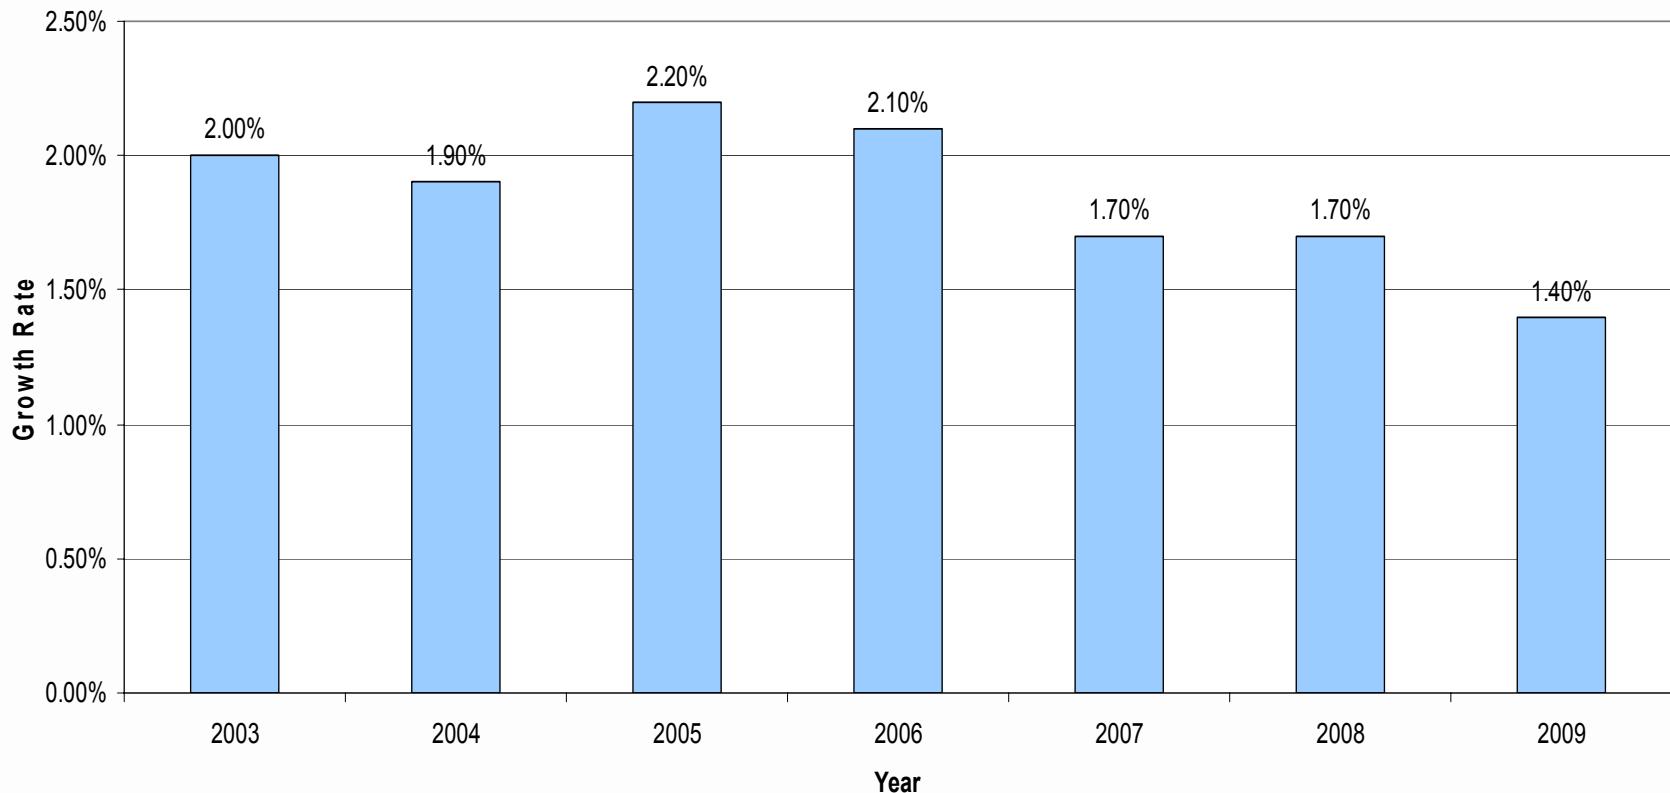

# Load - Forecasted

- Requested LDC forecasts Feb 2010
  - 11 years
  - Consistent with Resource Planning forecast
- All received in April 2010
- ATC Compiles
  - Comparisons to previous forecasts
  - Differences confirmed with LDCs
  - Finalized copy to LDCs – 3<sup>rd</sup> Qtr 2010

# Load – Forecasted

ATC 10-Year Assessment  
Forecasted Load Growth Rates  
Compounded Annually

# Generation Model

## Generation Additions:

- Only add generators with signed Interconnection Agreements
- Additions modeled at MISO Facility study location
- MISO queue Suspended Generators with signed IAs
  - included in after 18 months

## Generation Retirements:

- generators with a completed MISO Attachment Y are modeled as retired.

## Model Change Cut-off Date

# Generation Dispatch

## Balancing Authority Merit Order Dispatch:

- Used for Assessment Summer Peak models Balancing Authority Dispatch from merit order provided by Balancing

## ATC-Wide Merit Order Dispatch:

- Shoulder and Minimum Load models
- ATC-Wide Merit Order Dispatch determined with ProMOD

## General Dispatch Notes:

- signed IA
- but, no scheduled transactions
- then generation included in the host Balancing Authority.

# Reactive Power Resources

## Intact System

- 90% max VAr capability
- Meet intact voltage criteria.

## Outage Conditions

- 95% max VAr capability
- Meet voltage criteria for outages

# Sensitivities

- Load Forecast
  - 105% of expected
  - 5<sup>th</sup> and 10<sup>th</sup> years
- Generation Dispatch
  - 3000 MW import – 70% load
  - East-to-west – 90% load
- High Wind - shoulder load
- Minimum Load
- Other Ideas?

# 2011 Assessment Studies

- 1<sup>st</sup> contingency Needs – 4 years
- Multiple outage screening
- Generation -Transmission studies
- Distribution -Transmission studies
- Economic benefits studies
- Regional Reliability
- Public Policy Benefits

# Schedule

- Expected Load Forecast – April, 2010
- **Stakeholder Meeting** – May 10, 2010
- **Stakeholder Comments** – May 31, 2010
- Initial Study Plan - July, 2010
- Criteria and Methodology Update – August, 2010
- Model Development – 3rd Qtr
- Preliminary Needs – 4th Qtr
- **Preliminary Results** – 1<sup>st</sup> Qtr 2011
- Final Solutions – 2<sup>nd</sup> Qtr 2011
- **Document and Publish** – 3<sup>rd</sup> Qtr 2011
